DETAILED ACTION

Response to Amendment

The Examiner acknowledges the receipt of the Applicant's amendment filed on 02/06/2008. Claims 1-10 have been canceled. Allowable claim 11 has been amended to include the features of claim 5 and allowable claim 14 has been amended to include the features of claim 7. **Claims 11-16** are therefore currently pending in the present application.

Allowable Subject Matter

Claims 11-16 are allowed.

The following is an examiner's statement of reasons for allowance:

Consider **claim 11**, the best prior art found during the examination of the present application, **Saito et al. (U.S. Patent Application Publication # 2002/0034966 A1)**, fail to disclose, teach, or suggest a terminal for connecting to a wireless network, the terminal device comprising: a housing having a front panel including a slot therein for receiving a wireless module including a transmission and reception antenna, the transmission and reception antenna being located outside of the housing when the wireless module is received in the slot; a first antenna unit for connection to the transmission and reception antenna physically or spatially; a second antenna unit connected to the first antenna unit so as to be connected to the transmission and reception antenna via the first antenna unit, the second antenna unit for transmitting and receiving radio signals directly to and from the wireless network; and a cover for accommodating the transmission and reception antenna when the wireless module is received in the slot, the first antenna unit, and the second antenna unit, the cover being attached to the front panel of the

housing, wherein the first and second antenna units each have a first end and a second end, the second end of the first antenna unit is farther away from the housing than the first end of the first antenna unit, and the second end of the first antenna unit is connected to the first end of the second antenna unit.

Saito discloses a personal computer 16 having a body 14 including a side face 14A. The side face 14A includes a PC card slot 17 that is capable of receiving a wireless PC communications card 10. The communication card 10 has a card case 11 including an insertion part 11A which slides into the PC card slot 17 and an antenna housing 11B. The insertion part 11A includes a circuit board 31. The antenna housing 11B includes first and second inverted-F type flat-plate antennas 33 and 34 installed adjacent to each other at a designated interval across the width of the antenna 11B and connected to the circuit board 31 (Figures 4, 11, and 12, [0045]-[0046], and [0081]-[0085]).

However, the second inverted-F type flat-plate antenna 34 is not connected to the first inverted-F type flat-plate antenna 33 so as to be connected to the circuit board 31 via the first inverted-F type flat-plate antenna 33. These teaches clearly differ from the claimed invention, therefore, claim 11 of the present application is considered novel and nonobvious over the prior art and, consequently, is allowed.

Claims 12-13 which directly or indirectly depend upon claim 11 are therefore also considered novel and nonobvious over the prior art and, consequently, are also allowed.

Consider **claim 14**, the best prior art found during the examination of the present application, **Saito et al. (U.S. Patent Application Publication # 2002/0034966 A1)**, fail to disclose, teach, or suggest a terminal device for connected to a wireless network, the terminal

device comprising: a housing having a front panel including a slot therein; a wireless module including a transmission and reception antenna, the wireless module passing through the slot whereby the transmission and reception antenna is located outside of the housing; a first antenna unit physically or spatially connected to the transmission and reception antenna; a second antenna connected to the first antenna so as to be connected to the transmission and reception antenna via the first antenna unit, the second antenna unit for transmitting and receiving radio signals directly to and from the wireless network; and a cover accommodating the transmission and reception antenna, the first antenna unit, and the second antenna unit, the cover being attached to the front panel of the housing, wherein the first and second antenna units each have a first end and a second end, the second end of the first antenna unit is farther away from the housing than the first end of the first antenna unit, and the second end of the first antenna unit is connected to the first end of the second antenna unit.

Saito discloses a personal computer 16 having a body 14 including a side face 14A. The side face 14A includes a PC card slot 17 that is capable of receiving a wireless PC communications card 10. The communication card 10 has a card case 11 including an insertion part 11A which slides into the PC card slot 17 and an antenna housing 11B. The insertion part 11A includes a circuit board 31. The antenna housing 11B includes first and second inverted-F type flat-plate antennas 33 and 34 installed adjacent to each other at a designated interval across the width of the antenna 11B and connected to the circuit board 31 (Figures 4, 11, and 12, [0045]-[0046], and [0081]-[0085]).

However, the second inverted-F type flat-plate antenna 34 is not connected to the first inverted-F type flat-plate antenna 33 so as to be connected to the circuit board 31 via the first

inverted-F type flat-plate antenna 33. These teaches clearly differ from the claimed invention, therefore, claim 14 of the present application is considered novel and nonobvious over the prior art and, consequently, is allowed.

Claims 15-16 which directly or indirectly depend upon claim 14 are therefore also considered novel and nonobvious over the prior art and, consequently, are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: see PTO-892 Notice of References Cited.
